Таблица абсолютных коэффициентов

Коэффициент, рассчитанный по формуле Глоссбреннера, служит для сравнения результатов атлетов разных весов. Коэффициент Глоссбреннера отражает соотношение между собственной массой атлета (с точностью до 0,05 кг) и поднятым им весом.

Для определения **абсолютного результата** необходимо умножить сумму троеборья на коэффициент Глоссбреннера. Атлет, обладающий большим абсолютным коэффициентом, имеет предпочтение.

Например: Атлет с весом 45 кг набрал сумму 300 кг. Определяем абсолютный коэффициент (отмечено синим) и умножаем на сумму Абсолютный результат = 1.14330***300 =342,99.**
